

THE SHAPE OF THINGS TO COME

Women can now get their dream body in a fast and easy way.

EVERY woman wants to feel sexy. Many aspire to lose a few inches at the tummy and thighs or even firm up their buttocks. Physical exercise is by far the most effective way to improve your body shape and get the dream figure you have always wanted. But most women are not able to get their desired figure, as regular exercise requires time, effort and commitment.

Exercise vs. passive gymnastics

Now every woman can enjoy body-shaping results without the need for regular active exercise by using the latest electrical stimulation technology. Previously available only in professional beauty centres, electrical stimulation is electric impulses applied to contract and relax your muscles rhythmically to perform physical exercises.

This is also known as passive gymnastics: exercising your muscles without active efforts from you. As a result, you can achieve the slimming, firming benefits of physical exercise while enjoying a relaxing workout.

TUA 360 body-shaping belt

The TUA 360 is an advanced electrical stimulation device for passive gymnastics. It is an all-in-one slimming and firming belt that can be used anywhere on the body – to lift buttocks, to slim or tone your tummy, hips and thighs. Unlike ordinary slimming belts that merely massage the skin surface, TUA 360 employs scientifically proven electrical stimulation technology to exercise your deeper muscles tissues and treat dimpled skin.

“Women today are too time-stressed to exercise regularly to keep the pounds off or shed the extra inches. They want an effective, timesaving and proven product that
