

Looking Young With Non-Surgical Facelift

Non-surgical facelifts are one of the anti aging industry's best kept secrets. You may feel you could do with more than skin care in your battle with the forces of gravity - and yet you may not want plastic surgery and all that entails.

But you can do a lot to rejuvenate your face pain free by exercising your muscles - either following a proven face exercise routine or a simpler and hassle free way of using special micro-electrical stimulation equipment that exercises your face. You may assume that wrinkles are the result of the skin stretching - but the truth is that they form when the underlying muscles are no longer able to support the skin properly.

Face muscles are connected to both the skin and the bone, forming a cushion for the skin to rest on. It's when our face muscles start to lose their tone that wrinkles and lines appear. Luckily facial exercise can tone up those muscles resulting in smoother, healthier and younger looking skin. If you do the right exercises regularly the difference in your face will be good enough to make facial exercise a viable alternative to cosmetic surgery - and it's certainly less traumatic. The real beauty of facial exercise is that, unlike cosmetic surgery, it's painless and has no negative side effects.

If you are one of the millions of people who prefer natural anti-ageing strategies to surgery, your dream is about to come true with the TUA VISO micro-current non-surgical facelift machine for home use. It is the first handheld non-surgical facelift uniquely designed and manufactured in Italy to target the less-used muscle of your face. TUA VISO lifts the face and smoothens the wrinkles, giving you a younger looking face naturally in only 2 weeks.

TUA VISO works on the concept of electro-stimulation which is specific for delicate facial muscles. The electrostimulation impulses are carefully designed to give gentle exercise to the facial muscles, tightening and firming them to reduce slackness and restore natural contour. You can actually feel your facial muscles contracting in a synchronised rhythm. The process is extremely pleasant and relaxing which helps lift, firm, and erase years from your face without surgery or injections.

Unlike cosmetic surgery - you won't need to undergo a second or subsequent painful procedure every 5-10 years as gravity undoes the surgeon's work. If you keep your face muscles toned and lifted naturally then the results will endure for as long as you continue to exercise your facial muscle.

This means TUA VISO is a great investment to look young naturally and effectively. Exercising your facial muscles also brings extra oxygen to the skin's surface reducing toxins and enhancing the delivery of essential nutrients. The result is more youthful looking skin that glows. You certainly won't get that from cosmetic surgery.

TUA VISO has stood up under some extremely rigorous scientific testing. It was actually developed by a leading group in the manufacture of professional medical equipment in Italy. When Bologna University conducted an independent trial, the impressive research proved visible facial lift and redefinition after using TUA VISO for only 10 days! It is also easy to use with no special equipment involved. It comes with everything you need to get started right away. It operates on a simple 9V battery included in the kit. The only thing you'll need to supply is a little water from your tap!

TUA VISO promises to

1. Prevent and correct loss of facial muscular and skin tone, tightening loose skins
2. Prevent and reduce wrinkles, fine lines and eye bags
3. Shape, firm and lift the face and neck
4. Minimize excess facial fats and double chins
5. Improve the nutrition of the skin to encourage detoxification, cell replacement, collagen production and better overall appearance

In order to bring face muscles back up to speed it is recommended to use your TUA VISO every day. Once you've reached the desired affect then exercising your facial muscles two to three times a week will be sufficient to maintain the improvement. How long it takes to get to the optimum level of tone and lift depends on how weak your face muscles are when you start.

That may sound a long time but in reality facial exercise is an activity you can carry out anywhere - without special equipment - and which will probably take around half an hour each session. How many of us wouldn't be prepared to give up such a small amount of our time for a real improvement in our looks?
